

501 of 800 recordings gain SigMOS; 299 lose score

Original → ClearVoice → Sidon → DeepFilterNet3, full strength · same 800 recordings, 100 per source

Each dot pairs one recording

Changes by source · black ticks mark medians

Median individual change: +0.135 · mean: +0.199 · middle 90%: -0.608 to +1.159

Whole-file model estimates; any nonzero change is counted, without a calibrated meaningful-change threshold.

Vertical jitter separates dots within each source. Equal-source sample, not full-corpus proportions.
